

iBorders: Drones & Designs in the Sonoran Desert

Dr. Ben Muller
King's University College

Great Hall
Huron University College
Wednesday 18 November 2015
7:00 pm

All Welcome

Presentation co-sponsored by
Centre for Global Studies
Department of Political Science

Come take a journey to the so-called “virtual border” and hear Professor Benjamin Muller from King’s University College “drone on” about borders and borderlands through the lenses of technology, identity, surveillance & society. In this journey to the virtual border which focuses on Dr. Muller’s recent sabbatical research at the University of Arizona, we consider how drones, biometric technologies, artificial intelligence, surveillance and architectural designs reformulate borders and the bodies that cross

them, radically altering how we experience, understand and interact with borders and borderlands. In this borderland of data doubles, bodies as passwords, drone apps, and technospaces, you may even discover that you have already crossed the virtual border without even knowing it!
